# Syed Muhammad Anas Maududi

tafs4920@gmail.com | Portfolio | LinkedIn | GitHub

## PROFESSIONAL SUMMARY

Results-driven Full-Stack & AI-Native Developer with 5 years of hands-on experience building, debugging, and scaling modern web applications using React, Next.js, TypeScript, Python, and REST APIs. Strong expertise in AI-native development including RAG-based chatbots, agentic systems, AI Employees, and OpenAI Agent SDK integrations. Proven track record delivering real-world client projects — including production websites for local businesses — and deploying scalable cloud-native systems with Docker, Kubernetes, and cloud platforms. Expertise spans database integration (PostgreSQL, Neon DB, Supabase, vector/embedding databases), DevOps pipelines, and manufacturing AI Employees.

## EDUCATION

**O Levels (Undergraduate) —** The American Foundation Cambridge School

## CORE SKILLS

- React, Next.js, TypeScript, HTML, CSS
- Node.js, REST API Design & Integration
- PostgreSQL, MongoDB, Neon DB, Supabase, Embedding/Vector Databases
- Docker, Kubernetes, Cloud Deployment & DevOps Pipelines
- Claude CLI (Claudecli) & AI-Native Tooling
- AI-Native Development: RAG, AI Agents, AI Employees, OpenAI Agent SDK, OpenRouter
- Bug Fixing, Performance Optimization, Deployment Error Resolution
- Spec-Driven Development (SDD), Test-Driven Development (TDD)
- Authentication Systems (NextAuth, Third-Party APIs)
- Python Development, Streamlit

## PROFESSIONAL EXPERIENCE

**Freelance Full-Stack & AI Developer**

*Self-Employed — Local & Remote Clients | 5 Years Experience*

- Delivered production-grade web applications for local market clients including Danish Traders (danishtraders.pk) — a live commercial website currently serving customers.
- Designed, developed, and deployed full-stack applications using React, Next.js, Node.js, and PostgreSQL/Supabase for multiple clients.
- Containerized and deployed applications using Docker and Kubernetes across cloud platforms, ensuring scalability and high availability.
- Integrated diverse database solutions including PostgreSQL, Neon DB, Supabase, and vector/embedding databases for AI-powered applications.
- Built and deployed AI Employees — autonomous agentic systems — for clients and open-source use (AI Employee Vault on GitHub).
- Used Claude CLI and other AI-native tooling to streamline development workflows and agentic system design.
- Participated in multiple hackathons, delivering production-ready full-stack apps under tight deadlines.

## SELECTED PROJECTS

**Danish Traders**

Commercial website for a local business client — live production deployment serving real customers. — https://danishtraders.pk/

**AI Employee Vault**
Open-source repository of manufactured AI Employees — autonomous agentic systems built with OpenAI Agent SDK and OpenRouter. — GitHub Repository

**Scholar Assistant (Student Agent)**
AI-powered student assistant using OpenAI Agent SDK and OpenRouter, deployed on Streamlit. — https://studentagent.streamlit.app

**Physical AI – Humanoid Robotics Textbook**
Educational web textbook on Physical AI and Humanoid Robotics concepts. — View Textbook

**Full-Stack Todo App**
Production-ready task management app with full frontend-backend integration, built for hackathon. — https://full-stack-todo-app-hackathon.vercel.app

**Comfy Sofa — Static Design**
Pixel-perfect, responsive static website for a furniture brand, built to international UI/UX standards with clean layout, modern typography, and cross-device compatibility. — https://hackathon2submit.vercel.app

**Anas Baba Express**
Full e-commerce application with cart functionality, product catalog, and API integration. — https://anasbaba-express.vercel.app

**Mindful Mosaic**
Blog and content platform with API-driven content management. — https://mindful-mosaic-swart.vercel.app

**Student Portal**
Full-stack educational platform with Next.js and PostgreSQL (In Progress).

## ADDITIONAL HIGHLIGHTS

- 5 years of hands-on development experience across front-end, back-end, AI, and DevOps domains.
- Worked directly with local market clients to deliver real-world, production-grade software solutions.
- Experienced in cloud-native architecture: Docker containerization, Kubernetes orchestration, and multi-cloud deployments.
- Deep expertise in modern database ecosystems: relational (PostgreSQL, Neon DB), backend-as-a-service (Supabase), and AI-native vector/embedding databases.
- Pioneer in manufacturing AI Employees — autonomous agents designed to automate complex workflows.
- Active open-source contributor with public repositories on GitHub.
